

# STATEMENT OF WORK

## RAHA-TELE Platform — Feature Development & Completion

Prepared by: Aggrey Mutagaywa

Date: April 23, 2026

Version: 1.0

### 1. Project Overview

The RAHA-TELE platform is a web-based service marketplace currently under active development. During the initial audit and error-fixing phase, it became clear that the system has significant gaps beyond the listed bugs — areas where entirely new features must be built for the platform to function as a complete, production-ready product.

This Statement of Work (SOW) defines the full scope of new features to be developed, the client-side responsibilities (credentials and content to be provided), the timeline, the monetization model of the platform, and the payment structure — as governed by the Full-Time Software Developer Agreement between Aggrey Mutagaywa and Hencan Technologies.

## 2. Scope of Work

The following features are to be designed, built, tested, and deployed as part of this engagement. These go beyond routine maintenance and constitute new functionality as defined under Section 6 of the Developer Agreement.

### 2.1 Credit & Commission System

- Implement platform commission calculation (e.g., 30% platform / 70% escort split)
- Credit escort accounts when clients spend credits
- Record all transactions in the `credit_transactions` table
- Enforce credit expiry logic (`credits_expire_at` field)
- Build M-Pesa withdrawal/payout flow for escorts to request earnings
- Add configurable environment variables: `PLATFORM_COMMISSION_PERCENT`, `MINIMUM_WITHDRAWAL`, `CREDIT_EXPIRY_DAYS`

### 2.2 Escort Registration & Approval Workflow

- Public escort registration form
- Backend controller and route for escort applications (POST `/escort/register`)
- Admin approval queue — view pending applications
- Admin approve / reject escort accounts with notification

### 2.3 Admin Portal (Built with Filament)

The full admin panel will be built using Filament, providing a clean, maintainable interface for platform management.

- User Management — create, edit, suspend, ban users
- Escort Verification Queue — approve/reject pending escort applications
- Content Moderation — handle reported content and profiles
- Platform Analytics — earnings, commissions, user growth charts
- Role & Permission Management — assign and revoke roles
- System Settings — configure platform variables from the UI

### 2.4 Paid Messages & Paid Conversations

- Lock message content behind a credit paywall
- Set credit cost per message or conversation
- Payment verification flow before content is revealed
- Track paid message transactions

## 2.5 Escort Earnings Dashboard & Withdrawals

- Earnings overview — credits earned, pending, withdrawn
- Withdrawal request form tied to M-Pesa integration
- Transaction history view

## 2.6 Reviews System

- Review submission form for clients
- Rating update mechanism for escort profiles
- Report inappropriate review feature

## 2.7 Social Login (Google & Facebook OAuth)

- Install and configure Laravel Socialite
- Google OAuth login/register flow
- Facebook OAuth login/register flow
- Add social login buttons to Login and Register pages

*Note: Google and Facebook API credentials (Client ID, Client Secret, Redirect URI) must be provided by the client. See Section 4.*

## 2.8 Two-Factor Authentication (2FA)

- Enable optional 2FA for user accounts
- Authenticator app support (TOTP)
- Recovery codes generation

## 2.9 Messaging Improvements

- File and image attachments in conversations
- Typing indicators (real-time)
- Message reactions

## 2.10 CSS Fixes & Responsive Design

- Audit all pages for layout and styling inconsistencies
- Fix broken UI elements across desktop and mobile viewports
- Ensure full mobile responsiveness across all pages
- Cross-browser compatibility testing and fixes

## 2.11 Terms of Use & Privacy Policy Pages

- Dedicated Terms of Use page (content to be provided by client)
- Dedicated Privacy Policy page (content to be provided by client)
- Link both pages in footer, registration, and login flows

*Note: The legal content for Terms of Use and Privacy Policy must be drafted and provided by the client or their legal representative. The developer will implement and style the pages.*

## 3. Out of Scope

The following items are explicitly excluded from this SOW unless agreed upon separately in writing:

- Mobile app development (iOS / Android)
- Drafting legal content (Terms of Use, Privacy Policy text)
- Domain registration or hosting setup
- Third-party API costs (M-Pesa transaction fees, Google/Facebook API quotas)
- Ongoing post-delivery maintenance beyond the agreed warranty period

## 4. Client Responsibilities

The following must be provided by Hencan Technologies before or during development. Delays in providing these items may affect the project timeline.

| Item                       | Details                                                                 | Required By   |
|----------------------------|-------------------------------------------------------------------------|---------------|
| Google OAuth Credentials   | Client ID, Client Secret, Redirect URI from Google Cloud Console        | Phase 1 Start |
| Facebook OAuth Credentials | App ID, App Secret, Redirect URI from Meta Developer Portal             | Phase 1 Start |
| M-Pesa API Keys            | Consumer Key, Consumer Secret, Shortcode, Passkey from Safaricom Daraja | Phase 2 Start |
| Terms of Use Content       | Full legal text for Terms of Use page                                   | Phase 4 Start |
| Privacy Policy Content     | Full legal text for Privacy Policy page                                 | Phase 4 Start |
| Staging Server Access      | SSH / FTP credentials for deployment                                    | Project Start |

## 5. How the Platform Generates Revenue

RAHA-TELE is designed around a credit-based economy. The following monetization streams are built into the features covered by this SOW:

### 5.1 Credit Sales

Clients purchase credits to interact with escorts on the platform. Credits are the primary revenue driver.

- Clients buy credit bundles (e.g., 100 credits for KES 500)
- All interactions — unlocking phone numbers, paid messages, paid conversations — consume credits
- Revenue is captured immediately at the point of credit purchase

### 5.2 Platform Commission on Escort Earnings

Every time a client spends credits on an escort service, the platform automatically takes a commission before crediting the escort.

- Default split: 30% to platform, 70% to escort (configurable)
- Commission is captured passively on every transaction with zero manual effort
- Example: Client unlocks a phone number for 10 credits → Platform keeps 3 credits → Escort receives 7 credits

### 5.3 Paid Messages & Conversations

Escorts can lock their message content or set a credit fee to start a conversation, creating an additional revenue layer.

- Clients pay credits to unlock individual messages
- Clients pay a conversation fee to initiate a paid chat
- Platform takes its commission on each of these transactions

### 5.4 Featured / Boosted Profiles

Escorts can pay credits to have their profiles promoted in search results and the homepage.

- Featured listing = higher visibility = more clients
- Platform earns credits from escorts promoting themselves

## 5.5 Revenue Summary

| Revenue Stream                   | Who Pays                   | Platform Earns                    |
|----------------------------------|----------------------------|-----------------------------------|
| Credit bundle purchases          | Clients                    | 100% of sale price                |
| Commission on phone unlocks      | Deducted from escort share | ~30% per unlock                   |
| Commission on paid messages      | Deducted from escort share | ~30% per message                  |
| Commission on paid conversations | Deducted from escort share | ~30% per conversation             |
| Featured profile listings        | Escorts pay credits        | Credits = real money already sold |

## 6. Project Timeline

| Phase                           | Features                                                                                   | Duration  |
|---------------------------------|--------------------------------------------------------------------------------------------|-----------|
| Phase 1 — Admin Portal          | Filament Admin Panel (full), Social Login (Google & Facebook), 2FA                         | 2.5 weeks |
| Phase 2 — Core Systems          | Credit/Commission System, M-Pesa Withdrawals, Escort Registration & Approval               | 2 weeks   |
| Phase 3 — Monetization Features | Paid Messages, Paid Conversations, Escort Earnings Dashboard                               | 2 weeks   |
| Phase 4 — UI & Polish           | CSS fixes, Responsive Design, Reviews System, Messaging Improvements, Terms & Policy Pages | 1.5 weeks |

### Estimated Total Duration: 8 weeks

*Timeline assumes timely delivery of all client-side credentials and content as listed in Section 4. Delays in providing required items will extend the timeline accordingly.*

## 7. Payment Structure

This project shall follow a milestone-based payment structure as outlined below:

| Milestone            | Trigger                                                   |
|----------------------|-----------------------------------------------------------|
| 30% — Commencement   | Upon agreement of this Statement of Work by both parties  |
| 40% — Mid-Project    | Completion and approval of Phase 1 & Phase 2              |
| 30% — Final Delivery | Full delivery, testing, and client approval of all phases |

**Total Project Value: \$2,500 USD**

All payments shall be made within 14 working days of each milestone approval.
